    """
Exhaustively compute training and testing results for KNN across
[1, max_neighbors]. Outputs the maximum test score and (by default) a
visualization of the results.
PARAMETERS
----------
```

```
X_data        : explanatory variable data
y_data        : response variable
standardize   : whether or not to standardize the X data, default True
pct_test      : test size for training and validation from (0,1), default 0.25
seed          : random seed to be used in algorithm, default 219
response_type : type of neighbors algorithm to use, default 'reg'
    Use 'reg' for regression (KNeighborsRegressor)
    Use 'class' for classification (KNeighborsClassifier)
max_neighbors : maximum number of neighbors in exhaustive search, default 20
show_viz      : display or surpress k-neigbors visualization, default True
"""
